EXECUTIVE SUMMARY

An **early-warning screen**, not CSAT or NPS: 9,162 unique posts in 349 telco threads (2019-03-26 to 2026-09-26; 95% from 2026). The three largest threads hold 10% of posts; the biggest is "zym.sg Mobile (Singtel MVNO)". GPT-4o-mini, the labeller that best matched human labels (macro F1 0.641 vs VADER 0.380), reads **44% of posts as not happy** and 19% as happy; VADER on the same posts says 28% and 46%. **Network Quality leads** (36.9% with every thread weighted equally, 40.7% per post), then Mobile Plans (12.6%). Network Quality carries the most not-happy discussion. Using the same labeller on both sources, Reddit is 48% not happy and HWZ 37% (the platforms also discuss different topics). Among brands with at least 92 posts and 10 threads, Singtel (48% not happy, n=3970) and Giga (46% not happy, n=360) show the highest not-happy share. In the weekly huddle view, 2 week(s) crossed the huddle threshold (n ≥ 115 (twice the median week of 57.5 over the last 26 weeks)), the largest 352 posts in the week of 2026-03-16. Sentiment by GPT-4o-mini; issues by keyword rules plus GPT-4o.

HOW TO USE THIS DASHBOARD

Weekly 30-minute huddle. Charts triage; people decide.

A. QUEUE

Not-happy posts in Network Quality, App & Account, or Porting that week. Act only if n ≥ 115 (twice the median week of 57.5 over the last 26 weeks).

B. OPEN 10

Read ten source posts. Drop sarcasm, mixed-brand, and off-target labels.

C. MATCH

Tie remaining posts to tickets, outages, or billing — not to a vibe.

D. ONE OWNER

Assign a squad and a response date. No public brand ranking.

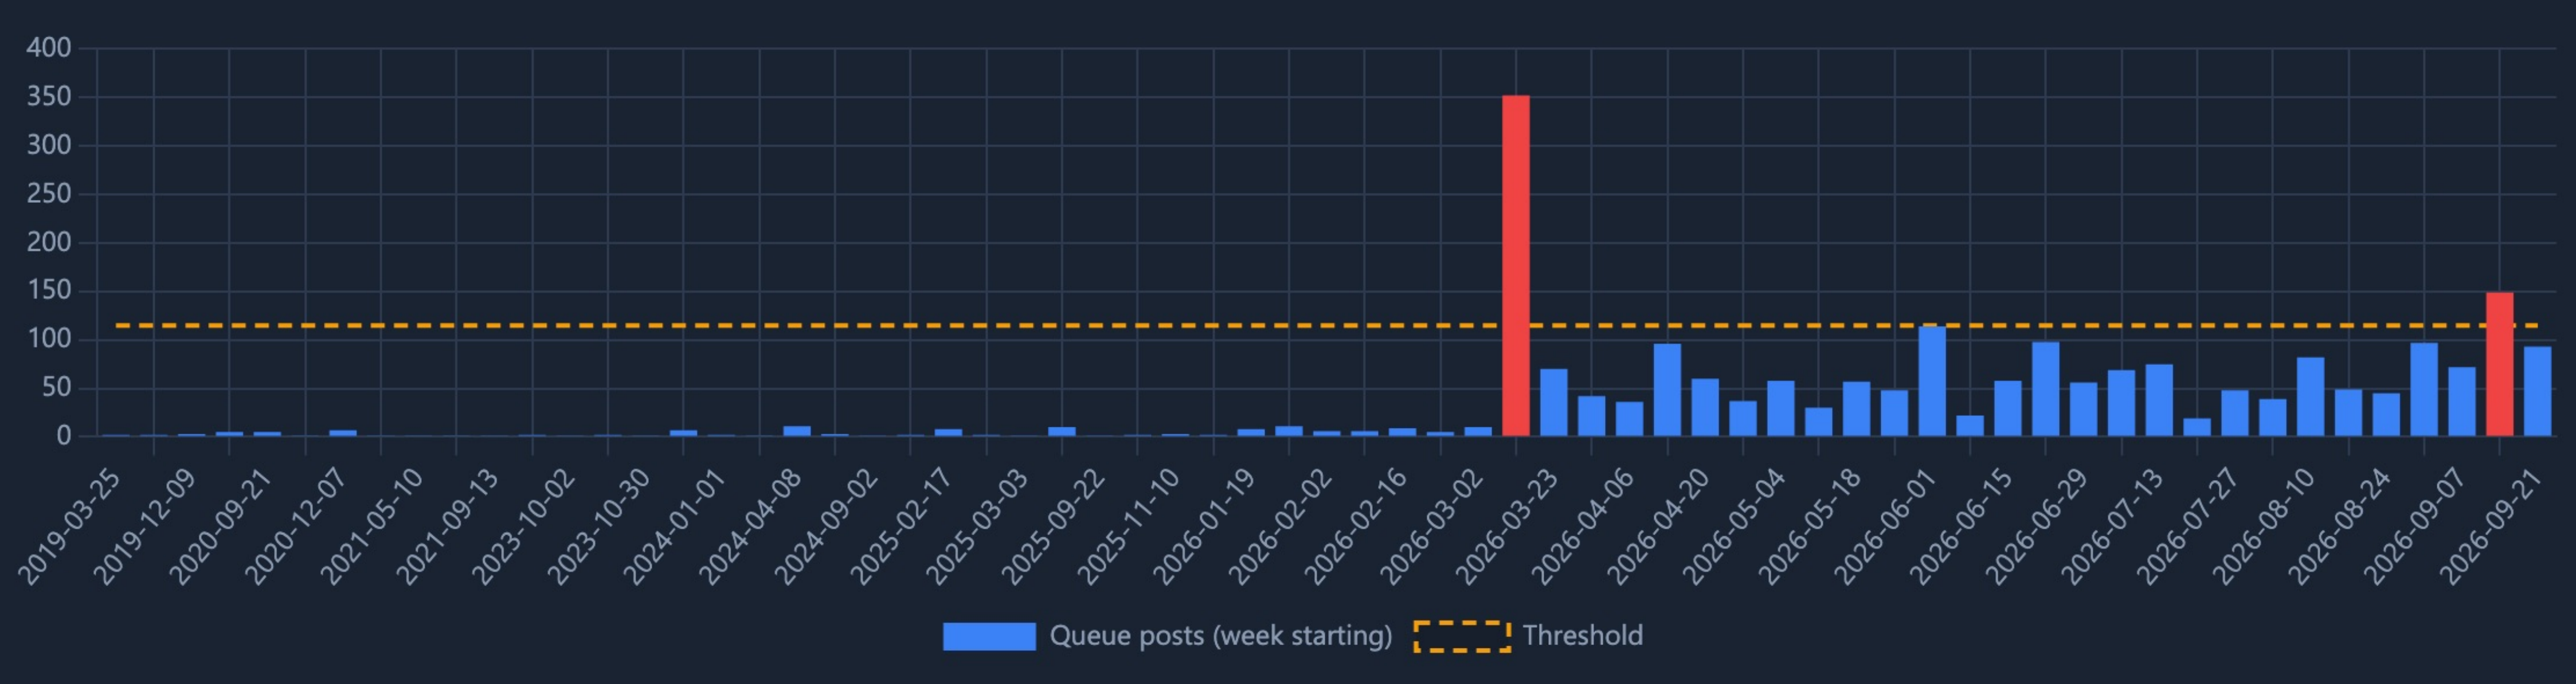
E. NEXT WEEK

Check whether that issue share fell. If not, escalate the same owner.

65 weeks with queue posts

Threshold: 115

2 week(s) at or above threshold; peak 352 posts

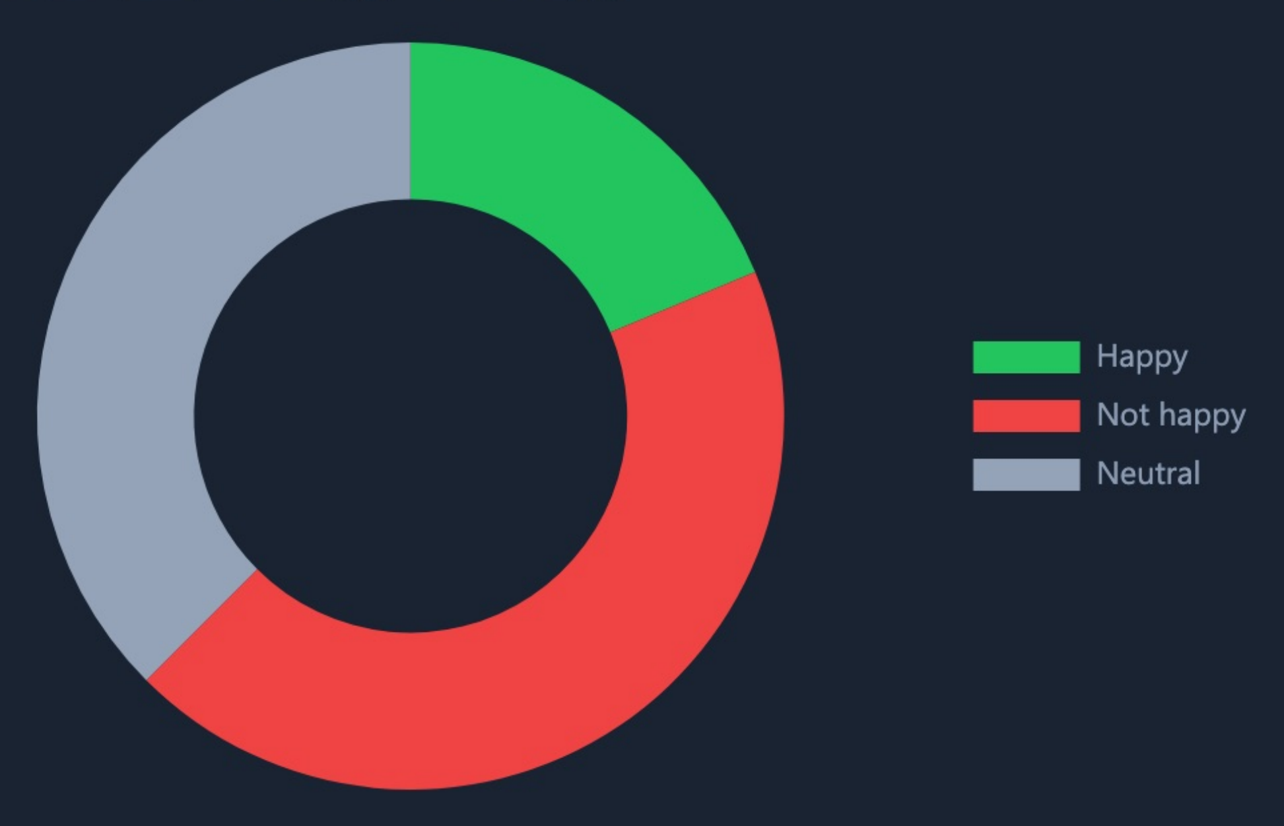


Rank only brands with at least 92 posts and 10 threads. Never publish a brand league table.

9,162	349	44%	19%	37%	10%
UNIQUE POSTS	TELCO THREADS	NOT HAPPY	HAPPY	NEUTRAL	POSTS IN TOP 3 THREADS

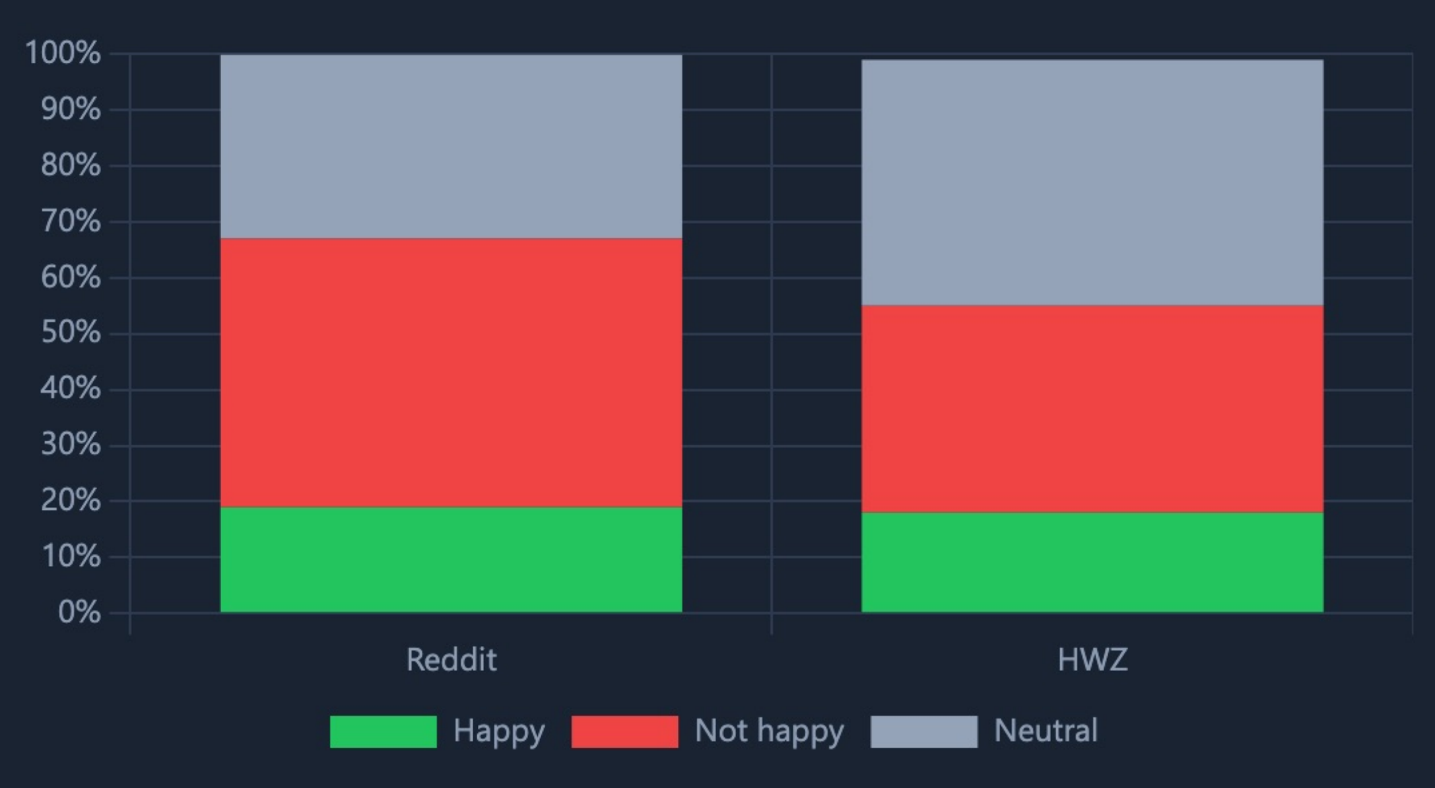
Forum tone is a screen, not a CSAT score

GPT-4o-mini on all 9,162 posts. VADER on the same posts: 46% happy, 28% not happy. Human gold labels (392 posts): 21% happy, 47% not happy.



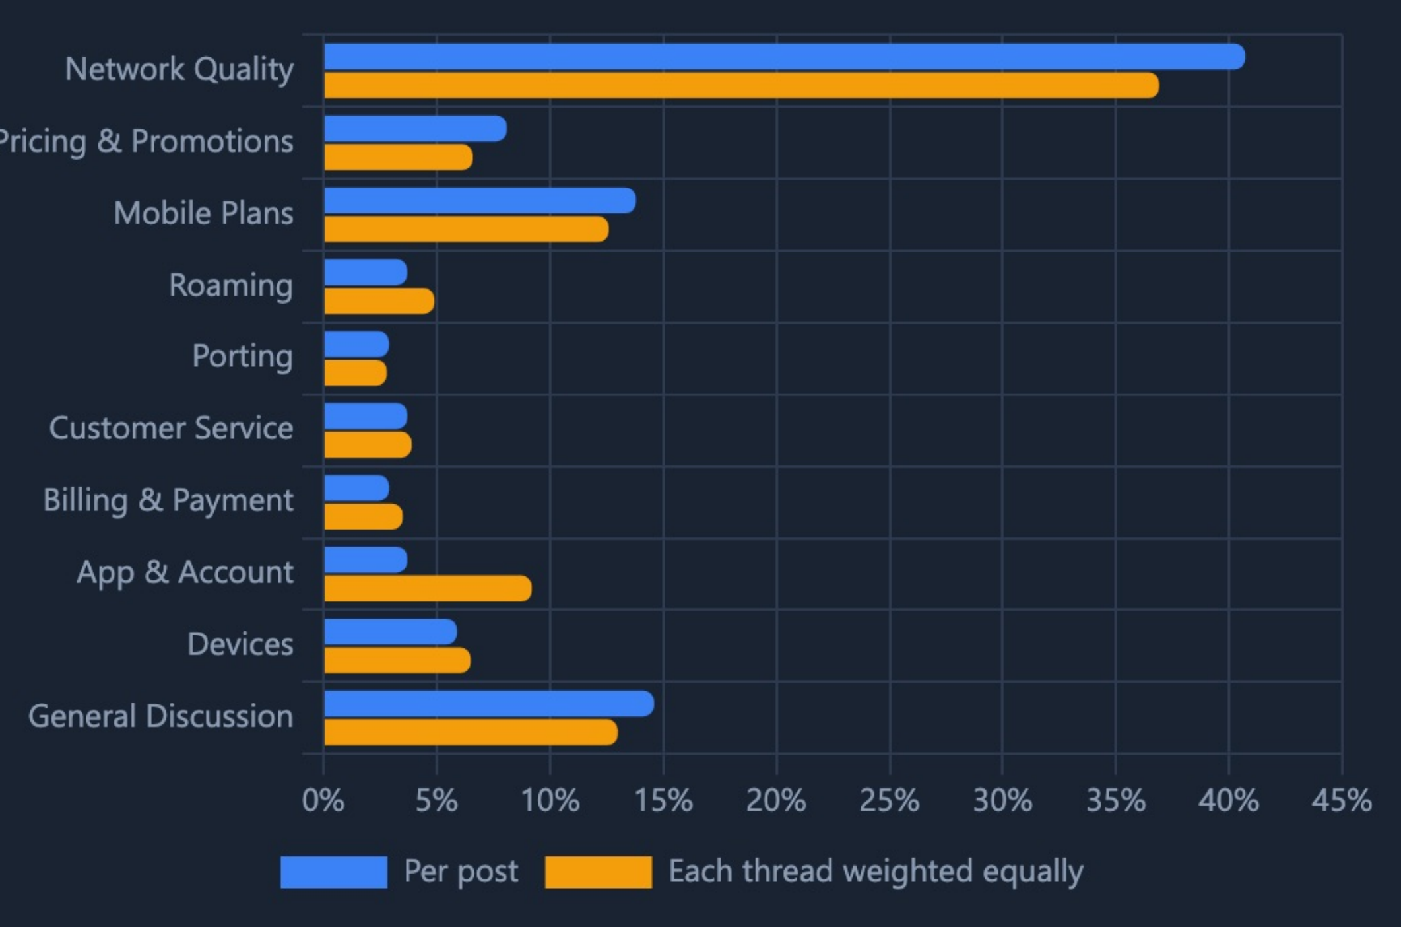
Reddit–HWZ gap of 11 points: check topic mix first

GPT-4o-mini: Reddit 48% not happy (n=5,711) vs HWZ 37% (n=3,451). Human gold labels: Reddit 49% vs HWZ 44%. The platforms discuss different topics and periods, so a gap is not a platform effect on its own.



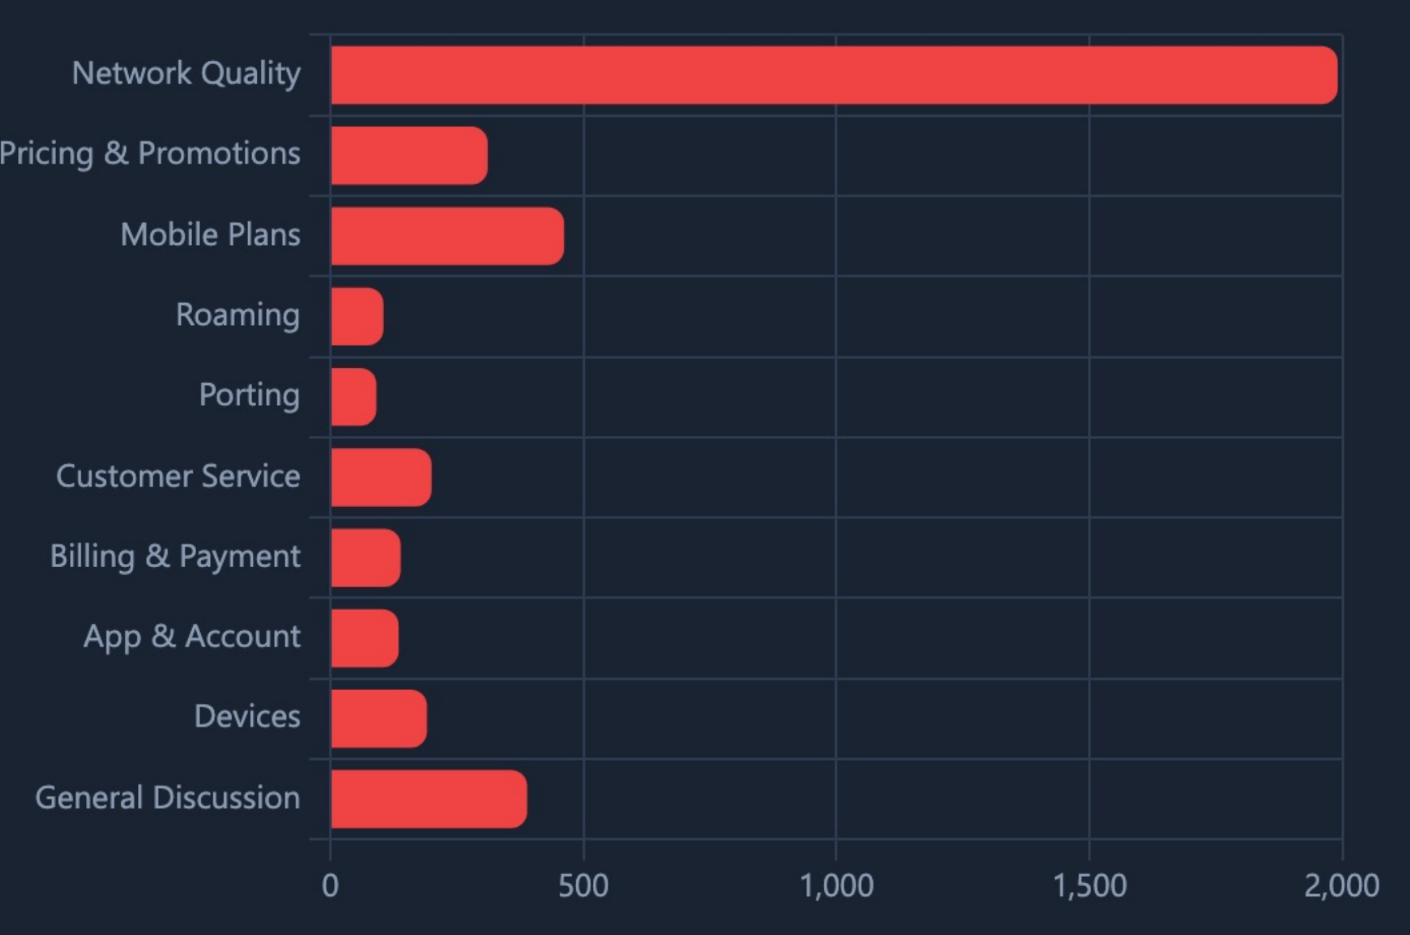
Network Quality leads, then Mobile Plans

Share of posts per issue, per post and with every thread weighted equally. A finding that holds in both is not one big thread talking. General Discussion is a residual, not a team.



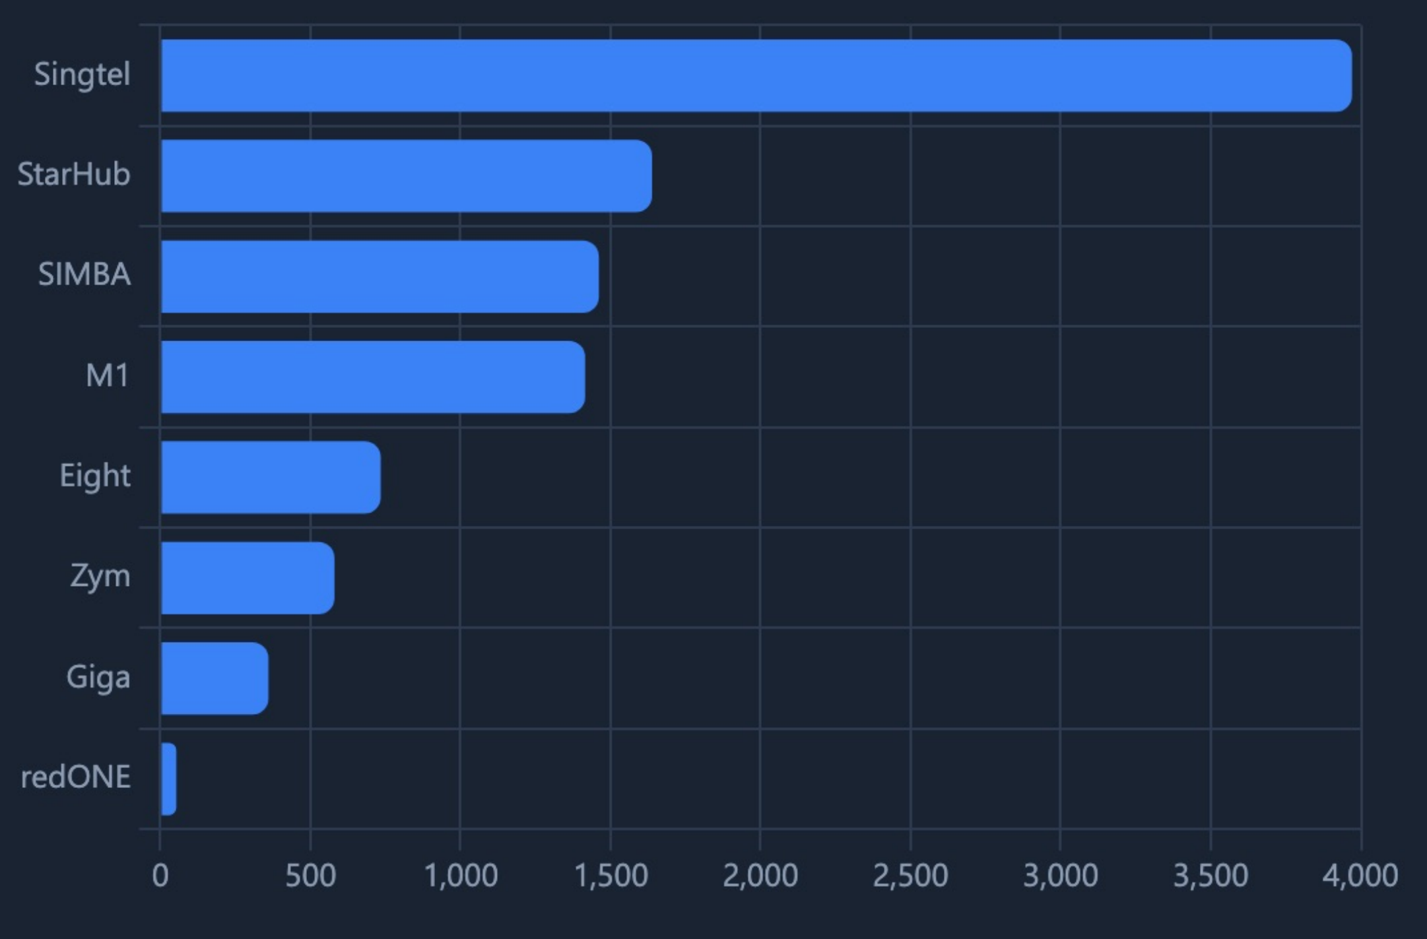
Network Quality carries the most not-happy discussion

Count of not-happy posts by primary issue (GPT-4o-mini). Volume is not severity: porting is small but retention-critical.



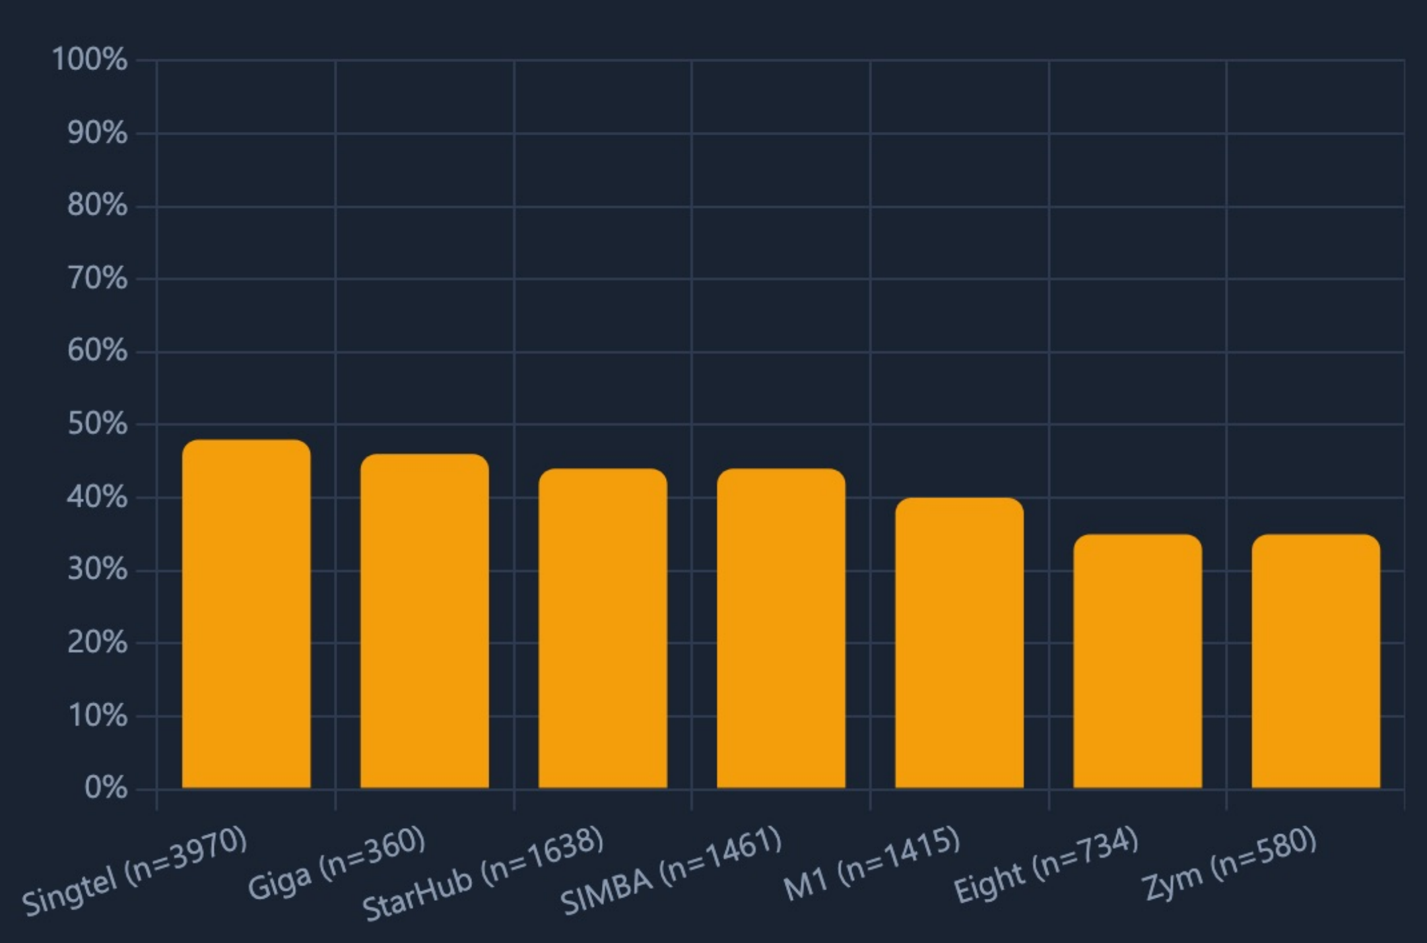
Volume of talk is not market share

Posts naming each brand. One post can name several brands.



Investigate large-n brands first

% not happy for brands with at least 92 posts and 10 threads. A brand's share can be driven by one event thread, so check the Threads column before reading it as brand-wide.



PER-TELCO HIGHLIGHTS

TELCO	POSTS	THREADS	NOT HAPPY	TOP ISSUES
Singtel	3970	238	48%	Network Quality, Mobile Plans
StarHub	1638	180	44%	Network Quality, Mobile Plans
SIMBA	1461	152	44%	Network Quality, Mobile Plans
M1	1415	156	40%	Network Quality, Mobile Plans
Eight	734	109	35%	Network Quality, Mobile Plans
Zym	580	73	35%	Network Quality, Mobile Plans
Giga	360	69	46%	Network Quality, Mobile Plans
redONE	53	13	57%	Network Quality, Customer Service

QUOTES BEHIND THE LEADING NOT-HAPPY ISSUES

> *"SingTel mobile and data signal not working for me at all, have had no signal since around 10am and it's still persisting"*
>
> REDDIT · Network Quality · Singtel

> *"If gonna take very long, I need to reload my M1 Maxx if not later go into base plan .... will affect..."*
>
> HWZ · Mobile Plans · Singtel, Zym

> *"Gomo gives you an ONR, which sucks. Sign up with Simba or Eight at the same price level, at least give you..."*
>
> REDDIT · Pricing & Promotions · SIMBA, Eight

> *"I ditched SingTel many years ago when they forced ONR and did not allow me to configure Bridge Mode even when requested."*
>
> REDDIT · Devices · Singtel

WHAT OPERATORS SHOULD DO, IN ORDER OF NOT-HAPPY SHARE

- **Network** Network Quality: 46.2% of not-happy, 36.9% of all (thread-weighted)
  Join named-location and outage posts to tickets and cell data; publish status and ETA during incidents. *Check: Tickets fall at that location; fewer "is it down?" threads.*
- **Product** Mobile Plans: 13.0% of not-happy, 12.6% of all (thread-weighted)
  Show fair-use limits, add-on charges (e.g. Caller ID), recurring price and host network at checkout. *Check: Fewer "which plan / which backend?" threads.*
- **Commercial** Pricing & Promotions: 6.7% of not-happy, 6.6% of all (thread-weighted)
  Publish intro vs recurring price and promo expiry; audit promotion fulfilment. *Check: Fewer fulfilment complaints, not just a lower list price.*
- **Device support** Devices: 5.7% of not-happy, 6.5% of all (thread-weighted)
  Document router, ONR/ONT and eSIM requirements per plan. *Check: Fewer equipment and bridge-mode threads.*
- **Service operations** Customer Service: 4.6% of not-happy, 3.9% of all (thread-weighted)
  Keep a self-service path and callback queue open during incidents; close escalations with a named owner. *Check: Fewer "cannot reach support" posts after the next incident.*
- **Roaming** Roaming: 4.5% of not-happy, 4.9% of all (thread-weighted)
  In-app "travelling to X" checklist: activation, coverage, overage cap. *Check: Fewer destination bill-shock posts.*

HOW TO READ THE THEMES

- **Network Quality:** Coverage, dead zones, outages and speed.
- **Pricing & Promotions:** Price-value comparisons, discounts and promotion fulfilment.
- **Mobile Plans:** SIM-only allowances, contract terms and plan comparisons.
- **Roaming:** Regional bundles, activation and overseas use.
- **Porting:** Port-in and port-out, rejects and switching.
- **Customer Service:** Hotline, agent and escalation experiences.
- **Billing & Payment:** Unexpected charges, refunds and payment handling.
- **App & Account:** Login, verification and self-service app friction.
- **Devices:** Phones, eSIM/SIM cards, routers and operator equipment.
- **General Discussion:** Telco news and opinions without a specific service issue.

LIMITATIONS

9,162 unique posts from self-selecting Reddit and HWZ users, not Singapore subscribers. 95% are from 2026 and the largest thread is "zym.sg Mobile (Singtel MVNO)", so brand and network shares describe those events as much as the market. Posts in a thread are not independent; compare per-post and thread-weighted shares. Sentiment is GPT-4o-mini, which scored macro F1 0.641 against human labels (VADER 0.380). One sentiment is copied to every brand a post names. Issue tags are keyword rules plus GPT-4o on unresolved rows; the corpus reassignments have no human check. This is a triage queue, not NPS, churn or market share. 1 post(s) had no GPT-4o-mini label and use VADER. Posts from 10 Apr to 26 Sep 2026 come from the newest HWZ thread pages and, for Reddit, the Arctic Shift research archive (posts and replies). On a separate 97-post gold set of those recent posts, GPT-4o-mini scored macro F1 0.637 (VADER 0.428) but read many complaints as neutral, so not-happy shares here are likely understated.
